**Connecting People and Technologies
for the Next Level**

We want to solve problems. Preferably with smart solutions.

Smart IT solutions for the digitalisation of your business

IT is today's most important technical competitive advantage. Smart and future-proof projects give companies a digital edge. Our integrated approach to IT consulting, software and services is distinguished by its tailor-made solutions.

Our developers, IT consultants and IT specialists bring companies to the forefront of the digital transformation. They take on support-related tasks, develop apps and design future-oriented solutions – regardless of whether it's **on-premises**, in the **cloud** or in **hybrid operation**. Iterative or agile as required – but always innovative! We combine many years of experience in engineering with up-to-date IT expertise. This enables our engineers to take **IoT**

solutions for **Industry 4.0** to the next level. We have more than 2,500 bright and committed IT specialists developing modern applications, stable architectures and cost-effective operating models. Why do our customers count on our team? Because we combine the **agility** of a start-up with the **reliability** of a well-established company. Because we have been connecting machines and technologies **for over 50 years: in the short-term, flexibly and securely.**

A good solution is half the battle **State-of-the-art business solutions**

Solutions for BI and reporting, CRM, business ERP. Implementation of SAP, Microsoft or Oracle applications – we have experts for all de facto standards and also realise tailor-made individual and interface solutions for reporting, controlling or merchandise management.

Coding for high-performance apps **Individual application development**

Back-end or front-end developments, from the design of the software architecture with UML, to programming in the development environments and programming languages commonly used on the market, down to GUI development. For software, client/server applications and web apps.

Our integration officers **Smooth system integration**

We make the connection: network integration, IT service desk and end user services, mobile device management. Your IT and the sensitive data of your company and your customers are safe and secure with intrusion detection and penetration testing, or to put it briefly: IT safety management.
